ISOId=209250-2; Sequence-VSP 001032;
DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,S2,S3,S5,S6) and one positively charged segment (S4). Segments 84 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at every third position.

SIMILARITY: Belongs to the sodium channel family.

SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                I alpha-Subunit (SCN2A).";

Takahashi H., Numa S.;

"Existence of distinct sodium channel messenger RNAs in rat brain.";

Nature 320:188-192(1986).

"C -!- FUNCTION: Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient.

C -!- SUBUNIT: The sodium channel consists of a large polypeptide and 2-3 smaller ones. This sequence represents a large polypeptide.

C -!- SUBCELIULAR LOCATION: Integral membrane protein.

C -!- DOMALN: The sequence contains 4 internal repeats, each with 5 polycophobic segments (S1, S2, S3, S5, S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at every third position.

C -!- SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                     Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            with febrile seizures plus type 2 (GEF8+2) [MIM:604233]. This autosomal dominant disorder is characterized by febrile seizures in children and afebrile seizures in adults. Penetrance is incomplete and a large intrafamilial variability of the phenotype is observed.

-I- DISEASE: Defects in SCN1A are a cause of severe myoclonic epilepsy in infancy (SMEI) [MIM:607208], a severe form of generalized epilepsy with febrile seizures. SMEI is a rare disorder characterized by normal development before onset, seizures beginning in the first year of life in the form of generalized or unilateral febrile clonic seizures, secondary appearance of myoclonic seizures, and occasionally partial seizures. It is associated with ataxia, slowed psychomotor development, and mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: Belongs to the sodium channel family. SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient. SUBUNIT: The sodium channel consists of a large polypeptide and 2-3 smaller ones. This sequence represents a large polypeptide. SUBCELLULAR LOCATION: Integral membrane protein.

Recept. Res. 7:467-497(1987).

-!- FUNCTION: Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the may pass in accordance with their electrochemical gradient.

-!- SUBCRIT: The sodium channel consists of a large polypeptide and 2-
-!- SUBCRITI and channel consists of a large polypeptide.

-!- SUBCRITI The sequence represents a large polypeptide.
-!- DOMAIN: The sequence contains 4 internal repeats, each with 5 segment ($1,$2,$3,$5,$6) and one positively charged characterized by a series of positively charged amino acids at every third position exists of positively charged amino acids at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         every third position.
-!- SIMILARITY: Belongs to the sodium channel family.
-!- SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Structure and function of sodium channel.";
J. Recept. Res. 7:467-497(1987).
-!- FUNCTION: Mediates the voltage-dependent

                                                                                                                The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100

                                                                                                                  AAM27591
                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders

cc mucleic acid probes for measuring gene expression in a sample derived cc from human breast and BT 474 cells. The method involves contacting the grobes with a collection of detectably labelled nucleic acids derived cc from mRNA of human breast, and then measuring the label bound to each cc expression of regions of genomic DNA predicted to encode proteins. They care useful for gene discovery, and for determining prediston and/or prognosing breast disease. Gene expression analysis is useful for casessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional conformation from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed conformation, but was obtained in electronic format directly from WIPO

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the hur bone marrow. They can be used to measure gene expression in bone max

                                                                                                                                                                                                                                                                                                                                                                                                            Human; bone
                                                                                                                                                                                                                                                                                                                                                                                                                              Human bone marrow expressed probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. diagnosting gene expression, the probes are useful for predicting, by measuring gene expression, the probes are useful for predicting, diagnosting, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

  Sequence 405
                                                    probes which are derived from genomic sequences expressed intelest acid brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                          Example 4; SEQ ID NO 27023; 650pp + Sequence Listing;
                                                                                                                                                                                                                                                                                                                                                             Single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-JAN-2001; 2001WO-US000667.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-AUG-2001.

The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-MAY-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel single exon nucleic acid probes (see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in nucleic acid expressed in the human breast. The probes are useful for predicting, disgnosing, grading, staging, monitoring and prognosing diseases of the human breast particularly those diseases with polygenic inflammatory diseases include: breast cancer, disorders of development, breast disease and non-carcinoma tumours. Note: The sequence data for obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in nucleic acid expressed in the human breast. The probes at high stringency to a predicting, disgnosing, grading, staying, monitoring and prognosing aeticlogy. The human breast, particularly those diseases with polygenic inflammatory diseases include: breast cancer, disorders of development, breast disease and non-carcinoma tumours. Note: The sequence data for obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABG36946,

                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC comprising (a) identifying exons from genomic sequence by the method CC above and (b) measuring the expression of each of the exons in several CC tissues and/or cell types using hybridisation to a single exon CC microarrays having a probe with the exon, where a common pattern of CC expression of the exons in the tissues and/or cell types indicates that CC the exons should be assigned to a single gene; a peptide comprising one CC probes/open reading frames (ORF). The probes are used for gene expression CC analysis, and for identifying exons in a gene, particularly using human CC lung derived mRNA and for the study of lung disease such as asthma, lung CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-CC histlocytosis, lymphangiolelomyomcosis, pulmonary alveolar proteinosis, CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The greener syndrome, is a peptide/protein encoded by a single exon probe of the invention. Note: The sequence data for this patent did not form part CC directly from WIPO at fip. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probes. Also included are a microarray comprising the novel set of probes the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 nucleic acid sequences are reading frames derived from the 12614 nucleic sequences.

CC antiarrhythmic, antimigraine, antidepressant, antiparkinsonian, converoleptic, tranquiliser, analgesic, nephrotropic, antidiabetic, and cophthalmological activity. A polynucleotide of the invention acts as an conclusion channel agonist, or ion channel antagonist. The methods, isolated mucleic acids, polypeptides, antibody, selective agonist, antagonist or combilator of an ion channel, cells and genetically modified non-human companies. The methods isolated combinated minal, are useful for the diagnosis and treatment of epilepsy and/or a companies. The periodic paralysis, myotonias, malignant hyperthermia, cardiac arrhythmias, episodic attaxia, migraine, Alzheimer's compasthenia, cardiac arrhythmias, episodic attaxia, migraine, Alzheimer's compassion, phobic obsessive symptoms, neuropathic pain, inflammatory companies, congenital stationary night blindness and total colour colours, constitution. The sequence represents a mutant protein of the correction. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly conformation and total colour colour colour colours. The present sequence represents a mutant protein of the colour col

The method comprises ascertaining if at least one of the genes encoding in the channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a cDNA channel subunits (ICS) has undergone a mutation event so that a contract so 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1855 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               derived from the subject has any of 134 nucleotide sequences. The method of the invention has nootropic, neuroprotective, inotropic, antipyretic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying predisposition to an ion channel dysfunction, such as periodic paralysis, cardiac arrhythmias, migraine, Alzheimer's disease, schizophrenia, anxiety and depression, by detecting encoding-gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        18-JUL-2001; 2001AU-00006452.

cc predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA cc derived from the subject has any of 134 nucleotide sequences. The method cof the invention has mostropic, neuroprotective, inotropic, antipyretic, antipyretic, reuroleptic, tranquiliser, antidepressant, antiparkinsonian, comphital activity. A polynucleotide of the invention acts as an cotropic of an ion channel antisposition, entitled better as a comphital mological activity. A polynucleotide of the invention acts as an cotropic canidal activity. A polynucleotide of the invention acts as an uncleic acids, polypeptides, antibody, selective agonist, antagonist or modulator of an ion channel, cells and genetically modified non-human cc animal, are useful for the diagnosis and treatment of epilepsy and/or a complete deviation of the diagnosis and treatment of epilepsy and/or a complete periodic paralysis, mytotonias, malignant hyperthermia, cardiac arrhythmias, episodic ataxia, migratine, Alzheimer's disease, Parkinson's disease, schizophrenia, hyperthexia, anxiety, compared to the proper antipolation consensive symptoms, neuropathic pain, inflammatory compared to the proper sent sequence represents a mutant protein of the invention. The sequence data for this patent is not represented in the comparited specification, but was obtained in electronic format directly xxx

                                                                               The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleic acid sequence which is differentially regulated in an animal subjected to pain and a cC kit to perform the method, an array, a method for identifying an agent cC that is differentially expressed in neuronal tissue of a first animal cC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence the expression of a polynucleotide sequence cC compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the activity of one or more of the specification, a method for identifying a compound that regulates the activity of one or more of the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polyneptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic construction conjury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene cc the specification, but was obtained in electronic form directly from WIPO at the medicament and that segmented are a rat protein (shown in Table 2 of the specification, but was obtained in electronic form directly from WIPO at the control of the printed cc final pain the ore appared to this patent did not form part of the printed cc final control of the printed in the final control of the printed cc final control of the printed contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     문
